1. Introduction

CartSure is an e-commerce application that enables users to register, log in, browse products, add products to a shopping cart, place orders, and make online payments. This test plan defines the scope, objectives, testing approach, resources, and schedule required to validate the functionality and quality of the application.

2. Objectives

Verify all application features work as expected.

Identify and report defects.

Ensure application stability and usability.

Validate business requirements.

3. Scope

In Scope

User Registration

Login and Logout

Product Search

Product Categories

Product Details

Shopping Cart

Checkout Process

Payment Processing

Order Management

Out of Scope

Third-party banking systems

Performance testing

Security testing

4. Test Scenarios

Registration Module

Verify registration with valid data.

Verify registration with invalid data.

Verify mandatory field validation.

Login Module

Verify login with valid credentials.

Verify login with invalid credentials.

Verify forgot password functionality.

Product Module

Verify product search.

Verify product filtering.

Verify product sorting.

Verify product details page.

Cart Module

Verify add to cart functionality.

Verify update quantity.

Verify remove item from cart.

Verify cart total calculation.

Checkout Module

Verify checkout with valid address.

Verify mandatory field validation.

Verify order summary page.

Payment Module

Verify successful payment.

Verify failed payment transaction.

Verify payment confirmation.

Order Module

Verify order placement.

Verify order history.

Verify order details.

5. Test Strategy

Smoke Testing

Functional Testing

Integration Testing

Regression Testing

User Interface Testing

6. Test Environment

<i>Component</i>	<i>Details</i>
Operating System	Windows 10/11
Browser	Chrome, Firefox, Edge
Database	MySQL
Application	CartSure Test Environment

7. Entry Criteria (Pre-Conditions)

Requirements document approved.

Test environment available.

Application build deployed.

Test cases prepared and reviewed.

Test data available.

8. Exit Criteria

All planned test cases executed.

No Critical or High defects open.

Test summary report completed.

Stakeholder approval received.

9. Roles and Responsibilities

Role	Responsibility
QA Tester	Execute test cases and report defects
Developer	Fix defects
Test Lead	Review testing activities
Project Manager	Project approval

10. Risks and Mitigation

Risks

Requirement changes

Environment unavailability

Delayed defect fixes

Mitigation

Regular communication with stakeholders

Backup test environment

Continuous defect tracking

11. Test Schedule

Activity	Duration
Test Planning	2 Days
Test Case Design	3 Days
Test Execution	5 Days
Defect Retesting	2 Days
Test Closure	1 Day

12. Test Deliverables

Test Plan Document

Test Strategy Document

Test Scenarios & Test Case

Requirement Traceability Matrix (RTM)

Defect Reports

Automation Scripts

Final Test Summary Report

13. Assumptions & Dependencies

Assumption: Stable environment, finalized requirement, and available test data.

Dependencies: Application build availability, developer support, and payment gateway sandbox Access.

14. Defect Management Process

All identified defects will be logged into Jira/ Bugasura with appropriate severity and priority levels.

After fixes are provided by developers, QA team will perform retesting and regression testing.

15. Tools Used

Selenium – Automation Testing

TestNG – Test Framework

Jenkins – CI/CD Integration

Apache JMeter -Performance Testing

Jira/Bugasura -Defect Tracking

GitHub -Version Control

16. Approval

This document requires approval from QA Lead, Project manager and Client stakeholders before testing execution begins.
